

# Not All Cancer

# Is Pink

**#CureTesticularCancer**

## April is Testicular Cancer Awareness Month

Often this cancer is known to be prevalent in men ages 15-34 and often times it can be treated and cured if found early. Men should do a self-exam regularly to ensure there are no irregularities. Four signs to look for:

- Painless lump in the testicle
- Feeling of unusual weight in the scrotum
- Swelling of the testicle
- Pain or dull ache in the testicle, scrotum or groin

If experiencing any of the above symptoms, contact your provider immediately!
